THE EXAMINER, SAN FRANCISCO: FRIDAY MORNING, MARCH 10, 1893. 5

BORING FOR TREASURE.

Captain M. S. Nelson Has Not Reached the Object of His Search.

SIX FEET OF CLAY YET TO PIERCE.

Mrs. Graham, the Lady Who First Instituted the Search, Arrives on the Same Train With Capt. Nelson.

Several persons were sufficiently attracted by curiosity to travel out to the ocean beach yesterday in order to watch the work done by Captain M. S. Nelson in his endeavors to rediscover the iron-bound chest supposed to lie buried beneath the sands.

M. S. Nelson. [From a photo by an "Examiner" artist.]

This is the box that was found by B. W. Clark nearly thirty years ago while walking on the beach one stormy night when the tide was low. From the wreckage strewn around it was supposed to have been a treasure box containing gold coin. It was raining in Boone County, Washington and Oregon, and as far down as Humboldt bay yesterday. But the barometer here was rising. It rose two-tenths during the day, and this is taken to mean that the storm has left the coast of the United States Weather Bureau officials and Captain Nelson generally believe the storm to be ended, with northerly winds.

Look out about to-night, though. The drizzling, which has been streaking it down the Coast, will probably be here by that time, and we may have rain in earnest. Up to this time the rain in the States north has not amounted to much, though it has continued for three or four days. Early yesterday the temperature in Oregon was down to 20 degrees. It was 32 here at 6:47 A.M. and here now. Later in the day it cleared here and in the south nearly as far as San Francisco, where there was a fifth of an inch of rain.

Over in Nevada the people are wrestling with snow. It snowed much of the day yesterday, and the temperature was low. At Winnemucca it was 10 degrees above zero, at Reno 18 degrees, at Red Mountain 12 degrees, respectively. It is generally unsettled all through the plateau. Here's the forecast:

"This has been the case for three days at least," said Mr. Jenkins. "The reason has been that there are two low, one going north and the other south, and at such a point of intersection the weather is always unsettled and confused. If there had only been one low we would have had weather of a different kind, but with two it is impossible to tell what to expect. It is barely possible that the rain which is indicated for to-morrow night may pass off to the south, because of this, but it is not probable."

There is a strange thing about California weather not known to the public, but on which all weather experts are well posted. It is this: Rain never comes from the north or northeast, and with no hold ourselves one way or the other, no information can be got from any point north of San Francisco. Thus, if the observer at Red Bluff wants to know whether it will rain or not he can get no information from us or any other station down here. He must look out for himself. Storms should not be looked for this month from Japan, China, the Aleutian islands and Behring sea.

If we only had an active corps of a score among our Western shore stations could report conditions to the north of us, we would be in no more of a fix than to tell with absolute certainty exactly what the weather would be in the morning of a rainless day, as to the weather bureau man knows by the barometer and the wind. Unfortunately, the Government has no maps to enable him to forecast what is coming. There is nothing else much to guide him. The Government has not the money to spend, but there can be no interest in guess-work.

"The main uncertainty, however, became the rule here at the eleventh. By no measure could assurance before under such and such circumstances it would rain. Sometimes it would rain, sometimes it would not, and there was no way to keep all the items of the case in mind to know which way it would go. Sometimes it was to do it. Yes, all instruments whether new or old this as the hardest of all the fads, because there is no one to give you pointers from the west."

QUAN MOW'S ILLNESS.

Effects of a Rigid Cross-Examination on a Chinaman.

For several days an interesting Chinese tabaco corpus case has been occupying the attention of Commissioner Heacock.

Among the Chinese women that arrived on the steamer Coptic from China was one Ung Gon, the wife of Ping Hon, a merchant of this city. Upon the arrival of the Oceanic Ping Hon was visited by Quan Mow, an interpreter, who informed him that for a consideration of $1000 he would secure the landing of the woman. The merchant refused to pay and referred the matter to the heads of an attorney.

The Government officials investigated the case, and, while they were satisfied that the woman was entitled to a residence here, for the purpose of getting the case in court and catching Quan Mow they refused her a landing. Ung Gon was detained on board the Coptic. She induced Agustus Gilbert to go to the Chinese quarters and make a statement to the effect that Quan Mow had attempted to bribe him to get his wife ashore.

Quan Mow was placed on the witness stand yesterday and subjected to a severe cross-examination. He denied having attempted to bribe Gilbert, but said that he was willing and able to pay him for his services in the premises. When he left the stand Quan Mow was in a fainting condition. He was carried to the Receiving Hospital in a patrol wagon, but refused to take any of the medicines offered him. He went out and purchased some white pepper, and after taking a dose of it soon recovered.

Quan Mow ran rent and Wells Engelke and Frank Gilbert, the latter a brother of Agustus Gilbert, appeared for the defendant. Gilbert was on the stand last night. "Have will be a great influx of treasure to this State during the present year. It is a little too early yet to tell exactly what the amount will be. During the time that I have been in Europe I have given the matter of the exhibition considerable thought, and, without special attention, it has been our object to try and secure more here. I have offices in London, Rotterdam, Antwerp, Liverpool and Hamburg. I have also been in correspondence with the various governments in Hamburg. I have been agents in Paris, Berlin and in many other European cities.

"
